To whom it may concern

Letter of reference

Based on E.ON AG's decision to extend their business activities to the eastern part of Europe, the company started the execution of one of the most modern gas fired power stations in the year 2007.

Directly from the first demolition works on the brown field TAKMA Ltd. was involved and supported our activities by offering engineering capabilities for such a large infrastructure project.

Based on the good experience we made with the availability of well experienced civil engineers, who are mostly certified to work for and on behalf of the relevant authorities as supervisor on the construction site, we decided to enlarge the started common business activities by involving other key personnel like HSE Managers and Electrical engineers, too.

The engineers provided by TAKMA Ltd. made a high contribution to the success of the project. We are very pleased with the excellent cooperation and high professional level of the service provided by TAKMA Ltd.

In accordance with our experience made within the last 4 years, we highly recommend TAKMA Ltd. as a serious and very professional acting company with a wide range of engineering competences.

About E.ON:

E.ON's facilities across Europe, Russia and North America, with more than 85.000 employees, generated just under €93 billion in sales in 2010. E.ON's objective is to make energy cleaner & better, wherever we operate and to be a global provider of specialized energy solutions.

In Slovakia, E.ON is represented by its subsidiary, E.ON Slovensko a.s., a service provider for E.ON Elektrárne s.r.o., the investor and operator of the Malženice Power Plant. E.ON has been active in Slovakia since 2002 and holds a 40% stake in ZSE Group, a leading energy provider in the country with a market share of 34 percent. In western Slovakia, ZSE oversees more than 36,000 km of power lines and annually supplies around 8TWh of electricity to all customer segments.

Kind regards

E.ON Elektrarne s.r.o.
